

The Windowmakers Way.

Windowmakers is one of Auckland's most trusted aluminium joinery fabricators. Our seven key milestones illustrate our collaborative work approach, ensuring we consistently exceed expectations and deliver on our performance guarantee.

01. Introduce

Every project is unique, and we recognize that everyone has their own way of working. Our processes are designed to align with yours. Let's start by setting up a meeting—we can meet at your office, our office, onsite, at your home, or at the Residium Design Centre in Parnell, where you can explore joinery and hardware options firsthand. During this initial discussion, we'll assess your aluminium joinery needs to ensure our service is tailored to your specific requirements.

03. Design

It's not just about the aesthetics, it's about functionality in design. Extrusion types, joinery suites, wind loadings and engineering can all be quite complex, so our team of designers will work with you to better understand your window and door requirements, before our engineers develop the technical joinery solutions that are compatible with your design.

05. Produce

In order to gain a competitive advantage and manufacture to the highest standards, we have continued to invest in the best state-of-the-art technology available globally. Our large purpose-built factory in Wainui houses precision Italian engineering in the form of electronic cutting and machining equipment and straight-line manufacturing processes, guaranteeing your joinery has an accurate, perfect finish every time.

07. Success

Once we have undertaken a site visit, provided a warranty and received official sign off from the site manager, the joinery aspect of your project is complete. In most cases **this is only the beginning of an ongoing relationship with Windowmakers.**

02. Establish

We aim to provide the ultimate service for our clients and for us this means establishing a quality relationship right from the beginning. The better we know you, the more we'll understand your joinery requirements. We also want you to get to know us. You'll be given a dedicated project manager to ensure consistency throughout your build. However big or small your project is, you will have on-going access to your Windowmakers project manager who will be your day-to-day contact. Rest assured, all of our team know about aluminium joinery fabrication, and more importantly they understand where joinery fits in with the building and construction process.

04. Schedule

It's our job to co-ordinate with all personnel on-site to schedule deliveries to arrive at the right time during a build. Once we've identified the perfect joinery solutions for your project, we will provide you with a detailed cost estimate along with the lead times required for production, delivery to site and installation. This can also include project managing the glass installers if required.

06. Deliver

We understand that building sites are busy places and that co-ordination is required to make sure delivery of your joinery is scheduled in line with the site manager's requirements. With our own fleet of vehicles, we will deliver your joinery to site—doing our best to ensure everything runs smoothly. Consistency across the project helps to minimise potential issues.
